Imaging and Deployment Architecture

Prerequisites - Repository Creation

Image Repository

Driver Repository

Manual Collection

Automatic Collection

OS Deployer- Key Features

Key Features

- ✓ Online and offline image creation
- ✓ Zero-touch deployment
- ✓ Deploy OS images to WFH users
- ✓ Hardware independent deployment
- ✓ Migration of user profiles
- ✓ Deploying images to remote computers
- ✓ Automatic driver management

Deploy OS anywhere in the world

- ✓ Deploy OS to computers in remote offices
- ✓ Deploy OS without any physical contact with the target machine
- ✓ Distribute operating systems to multiple computers at once
- ✓ Schedule deployment during off-peak hours
- ✓ Create computer images without compromising productivity
- ✓ Shrink image partitions before image creation

Custom deployment

- ✓ Automatic restart/shutdown of computers after deployment
- ✓ Distribute Software Applications, Drivers, and Others
- ✓ Transparent Computer Appointment
- ✓ Associate computers with domains and user accounts
- ✓ Direct OS deployment from templates

Driver Management made easy!

- ✓ Install drivers from different vendors after deploying the operating system
- ✓ Simple and straightforward media creation
- ✓ Download and install WinPE with just a few clicks
- ✓ Advanced and automated driver management

Save time and effort

- ✓ Centralized control for all operating system needs
- ✓ Rapid deployment launch with a unique access code
- ✓ Multiple boot options to fit your environment
- ✓ Deploy an original image to all computers, regardless of brand and model

Audit-ready reports

- ✓ Easy-to-analyze graphical representations
- ✓ Get a list of all added drivers by class
- ✓ Granular Status of Deployment Tasks
- ✓ Complete image information by operating system and added drivers

Summary

OS Deployer is a complete imaging and deployment solution that allows administrators to capture partitions from different operating system vendors, customize the image, configure post-deployment activities, and deploy to multiple computers inside and outside of your corporate network at the same time.
