RecoveryManager Plus

RecoveryManager Plus

A one-stop solution for your Active Directory, Office 365,
and Exchange environment backup needs

Outline

- ✓ What is RecoveryManager Plus?
- ✓ What can RecoveryManager Plus do?
- ✓ RecoveryManager Plus architecture
- ✓ Salient features and benefits of RecoveryManager Plus
- ✓ Licensing
- ✓ Pricing

A backup in time saves nine... hours of complaining

Deleted AD objects, files, folders, or mailbox items can rob organizations of employee productivity

A single backup is all it takes to avoid hours of frustration and downtime

What is RecoveryManager Plus?

What is RecoveryManager Plus?

- ✓ A scripting-free, GUI-based, holistic backup solution
- ✓ Back up your Active Directory, Office 365 (Exchange Online, SharePoint Online and OneDrive for Business), and on-premises Exchange environments
- ✓ Overcome any disaster caused by unwanted changes by restoring AD objects, mailboxes, and site items to any of their previous states in a few simple clicks

What can RecoveryManager Plus do?

What can RecoveryManager Plus do?

- ✓ Back up and restore all objects in your domain, including users, groups, OUs, GPOs, computers, and contacts
- ✓ Back up and restore all changes made to schema classes and attributes
- ✓ Restore AD objects without having to restart your domain controllers
- ✓ Back up and restore all mailbox items, including users' emails, calendar entries, contacts, journals, notes, posts, and tasks, in your on-premises Exchange and Exchange Online environments

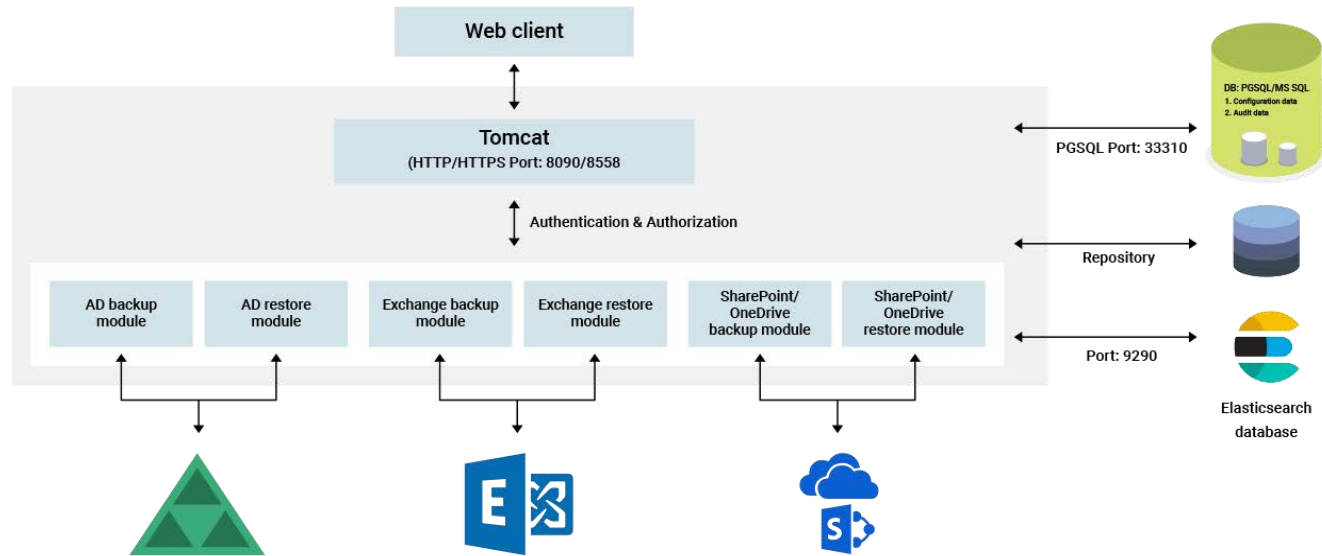

What can RecoveryManager Plus do?

(Cont.)

- ✓ Export entire mailboxes or just part of one to PST format for secure archival
- ✓ Back up and restore all site collections, sites, lists, and document libraries in your SharePoint Online environment
- ✓ Back up and restore all files and folders in your OneDrive for Business environment

RecoveryManager Plus architecture

RecoveryManager Plus architecture

Salient features and benefits of RecoveryManager Plus

Active Directory

Multi-domain support: Back up AD objects from multiple domains from a single console

Linked attribute restoration: Restore an object's linked attributes, including *memberof*, when restoring deleted user accounts. User accounts will automatically be made members of all security and distribution groups they belonged to before being deleted

Incremental backups: Back up just the changes made after the last backup cycle to back up AD faster

Version management: Maintain each backup of an object as a separate version, and restore an object to any preferred version

Active Directory(Cont.)

Attribute-level restoration: Restore AD objects granularly. While restoring objects, you have the flexibility to restore only specific attributes

Backup retention: Define the number of full backups to be retained, and discard older full backups and their corresponding incremental backups to save storage space

Rollback: Restore AD to a previous backup point, which will automatically undo all changes made to objects after that point in time

AD recycle bin: Restore deleted AD objects and their attributes, including their parent containers, in a single click

Active Directory(Cont.)

Role delegation: Delegate preconfigured roles like Admin, Operator, or Auditor, or create your own custom roles and assign them to end users to enable them to perform specific functions in RecoveryManager Plus

Scheduled backups: Schedule AD backups during non-business hours

Office 365

Multi-tenant support: Add multiple Office 365 tenants to RecoveryManager Plus, and manage your backups from a single console

Incremental backups: Back up just the changes made after the last backup cycle

Export to PST: Export entire mailboxes or part of one to PST format for secure archival

Download site data: Bulk download all data from your SharePoint Online and OneDrive for Business site backups

Azure backup storage: Store your Office 365 backups in Azure Blob Storage and Azure file shares

Office 365(Cont.)

Item-level restoration: Restore individual mailbox items, SharePoint Online document libraries, or even a single OneDrive for Business file

Restoration preview: Preview content, attachments, and documents from Exchange Online, SharePoint Online, and OneDrive for Business backups before restoring them

Backup retention: Define a retention period for your Office 365 backups, and automatically discard older backups

Office 365(Cont.)

Role delegation: Delegate preconfigured roles like Admin, Operator, or Auditor, or create your own custom roles and assign them to end users to enable them to perform specific functions in RecoveryManager Plus

Scheduled backups: Schedule your backups to happen during non-business hours to minimize the load on your network

Advanced search: Browse through backup copies and find particular mailbox or site items with advanced search filters

Exchange

Multi-organization support: Add multiple Exchange organizations to RecoveryManager Plus, and manage your backups from a single console

Export to PST: Export entire mailboxes or part of one to PST format for secure archival

Cross-platform restoration: Restore backups of on-premises Exchange mailboxes to a mailbox in your Exchange Online tenant and vice versa

Item-level restoration: Restore individual mailbox items, such as a single email or calendar event, instead of restoring the entire mailbox from a backup

Exchange(Cont.)

Cross-user restoration: Restore backed-up mailbox items to the same mailbox, to a different mailbox, or even to a mailbox in a different tenant or organization

Azure backup storage: Store your Exchange backups in Azure Blob Storage and Azure file shares

Advanced search: Browse through backup copies and find particular mailbox items with advanced search filters

Restore preview: Preview backed-up items to make sure the right value is restored

Exchange(Cont.)

Backup retention: Define retention periods for your Exchange backups and discard backups that have exceeded the retention period

Role delegation: Delegate preconfigured roles like Admin, Operator, or Auditor, or create your own custom roles and assign them to end users to enable them to perform specific functions in RecoveryManager Plus

Scheduled backups: Minimize the load on your network by scheduling backups during non-business hours

Licensing

Licensing

RecoveryManager Plus is licensed individually for Active Directory, Exchange (on-premises and Exchange Online), SharePoint Online, and OneDrive for Business components. It is licensed through annual subscriptions based on the following parameters:

- ✓ Active Directory: Number of enabled user objects backed up
- ✓ Exchange: Number of mailboxes backed up or exported
- ✓ SharePoint Online: Number of sites backed up
- ✓ OneDrive for Business: Number of sites backed up

Pricing

Pricing

Pricing starts at:

\$475
