ENDPOINT One™
A Channel IT brand

Your Ultimate Business Security Solution
Prevent, Defend, Protect, Succeed

EndpointOne™ is a comprehensive security service that uses a range of system strengthening techniques, technologies for preventing and detecting threats, along with machine learning and behavioral analysis, to offer enhanced protection against advanced attacks.
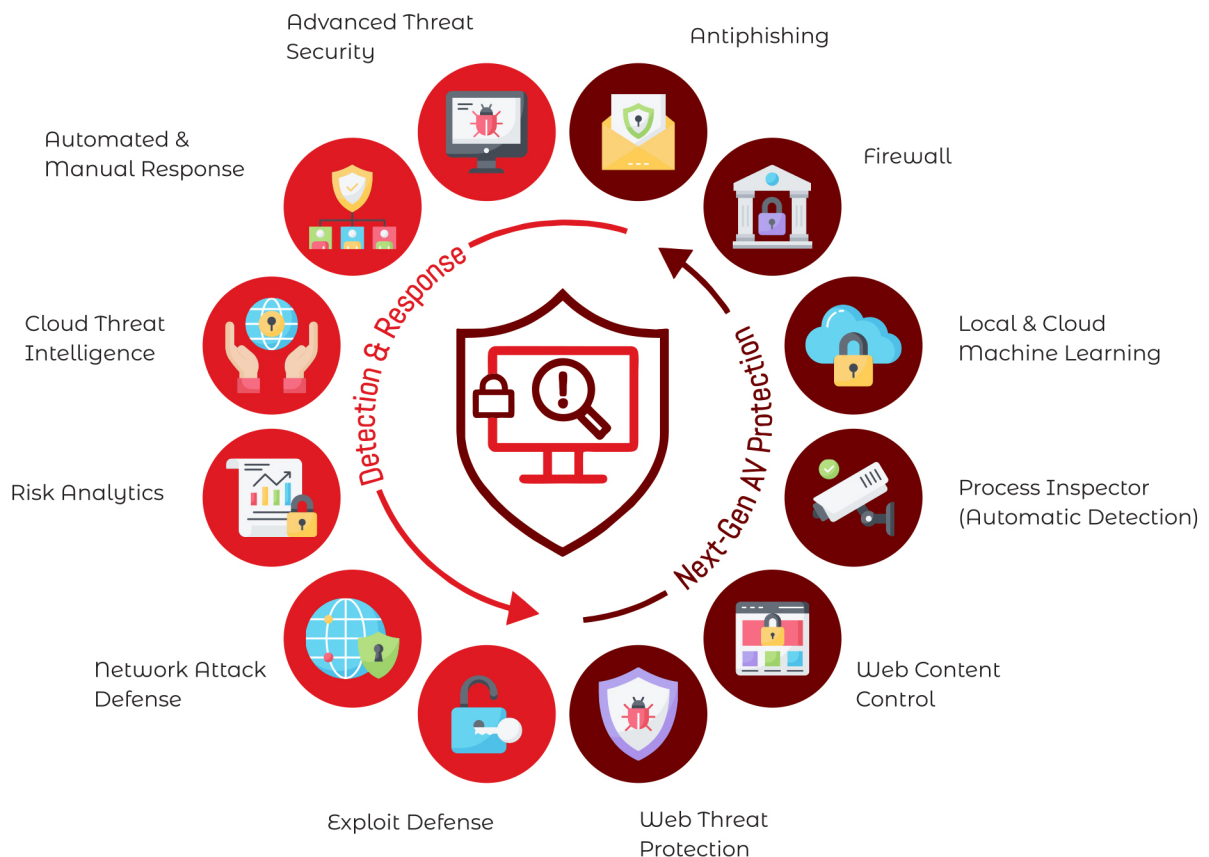

EndpointOne™ is designed to safeguard what is most important to you.

Your Data, Your Infrastructure, Your People.

Advanced ransomware attacks and data breaches, which often bypass most antivirus products, pose significant threats to service providers and their clients' businesses. The rise in remote work further escalates these risks. EndpointOne™ offers a unified and highly effective cybersecurity solution that outperforms other Next-Gen or EDR products in preventing and detecting these more sophisticated threats.

Protection Points

- Physical endpoints
- Microsoft Windows PCs and servers
- Mac computers
- Point of sale (POS) and ATM endpoints
- Servers
- Cloud workloads
- Virtual machines

Advanced Threat Security · Antiphishing · Firewall · Local & Cloud Machine Learning · Process Inspector (Automatic Detection) · Web Content Control · Web Threat Protection · Exploit Defense · Network Attack Defense · Risk Analytics · Cloud Threat Intelligence · Automated & Manual Response · Detection & Response · Next-Gen AV Protection

The core of the EndpointOne™ world is the Single Console, the unified, highly efficient next-generation antivirus, endpoint detection and response, risk analytics, and system hardening.

Our enterprise-level Advanced Threat Security feature provides a robust defense mechanism against evolving cyber threats, while the Enterprise Endpoint Detection and Response (EDR) offers advanced incident visualization and response capabilities for security events across all platforms.

Supported Operating Systems

Windows · Linux · MacOS

ENDPOINT**one**™
A Channel IT brand

Endpoint Detection & Response (EDR)

- **Risk Analytics**

Continuously monitoring of your system behavior by identifying anomalies and providing real-time risk assessments.

- **Cloud Threat Intelligence**

Gain access to the latest threat data in real-time to ensure proactive threat prevention and faster response times to emerging cyber threats.

- **Exploit Defense**

Provide a strong defensive barrier against zero-day attacks that helps prevent system compromise.

- **Network Attack Defense**

Safeguard your endpoints from network-based attacks and monitor network traffic to identify and mitigate suspicious activities.

- **Advanced Threat Security**

Proactively identify and neutralize emerging threats to bolster your devices' resilience against cyberattacks.

- **Automated & Manual Response**

Gain detailed visibility into security incidents on your endpoints to understand and respond to security events effectively.

Next-Gen Antivirus Protection (NGAV)

- **Local and Cloud Machine Learning**

Provides dynamic threat detection and prevention, adapting to new attack methods and protecting your endpoints effectively.

- **Web Threat Protection**

Shields your devices from web-borne threats, such as phishing attempts and malicious downloads.

- **Web Content Control**

Empowers Internet access management and regulation, enabling to protect your network from potential threats originating from the web.

- **Firewall**

Provides a robust network security layer for your devices for controlling incoming and outgoing network traffic.

- **Process Inspector (Automatic Detection)**

Automatically detect and analyze running processes on your systems to identify suspicious activities and potential threats.

- **Anti phishing**

Actively identifies and blocks phishing attempts, protecting your users from falling victim to fraudulent websites and email scams.

Boundaries Known, Now Explore Beyond

Device Control

Manage and secure USB and other peripheral devices connected to your endpoints.

Patch Management

Automate security patching and updating of your systems to protect devices against vulnerabilities.

Endpoint Encryption (BitLocker)

Ensure sensitive data remains confidential even if the device is lost or stolen.
