

An exclusive Microsoft 365 security solution

- Monitor all Microsoft 365 services in a single, user-friendly console.
- Perform extensive audits to prevent data leaks and security breaches.
- Take instant action on critical events with real-time alerts.
- Fall in line with IT regulatory mandates with our compliance reports.
- Monitor the health and performances of Microsoft 365 features and endpoints.
- Scrutinize emails and identify phishing attacks with advanced content search.
- Create custom help desk roles and delegate tasks to ease the admin workload.
- Carry out in-depth security analysis by integrating with a SIEM solution.

The challenge at hand

A [recent study](#) has shown that cyber criminals steal business data once every 39 seconds. It's estimated that cybercrime will cost the world \$6 trillion annually by 2021. Preventing and battling data breaches has become crucial for businesses, and most cybersecurity solutions break the bank, forcing companies to increase their budget for IT security. The challenge is finding a cost-effective security solution that can secure and fortify your organization.

Introducing M365 Security Plus

M365 Security Plus is an exclusive security solution that fortifies and protects Microsoft 365 environments. It provides an exhaustive list of audit reports to monitor various user and admin activities. M365 Security Plus helps you stay on top of service outages with around the clock monitoring of the health and performance of Microsoft 365 services. You can also configure custom alert profiles and receive instant email alerts for critical events and indicators of security breaches. Advanced security features like mailbox content search and threat analysis help maintain the security posture of your Microsoft 365 setup.

Microsoft 365 auditing and alerting

- Perform comprehensive audits on admin and non-admin activities across all Microsoft 365 services to ease your security concerns.
- Prevent security breaches with audit reports on spam and malware detection, file and folder activities, data loss prevention matches, failed logons, and more.
- Take immediate action with real-time notifications for critical events.
- Configure custom audit and alert profiles for business or non-business hours.
- Schedule audit reports to be generated periodically and emailed to you.
- Archive your audit logs as password-protected reports, and have them restored when needed.
- Perform in-depth security analysis by integrating with a SIEM solution.

Microsoft 365 monitoring

- Monitor Microsoft 365 features and endpoints around the clock.
- Get instant notifications when a decline in service health is detected.
- Gain access to historical Microsoft 365 service health monitoring data older than 30 days.
- View granular details on the incidents that have occurred across all Microsoft 365 services in the service health dashboard.
- Configure custom profiles to monitor specific features and endpoints.
- Use graphs and charts illustrating the overall health and performance of Microsoft 365 services to facilitate quick decision making.

Supported Microsoft 365 services

- Exchange Online
- Azure Active Directory
- Skype for Business
- OneDrive for Business
- SharePoint Online
- Yammer
- Microsoft Teams
- Microsoft Stream
- Microsoft Sway
- Power BI

Hardware (Recommended)

- Processor: P4 - 3.0GHz or better
- RAM: 4GB
- Disk space: 20GB

Supported platforms

- Windows Server 2016
- Windows Server 2012 R2
- Windows Server 2012
- Windows Server 2008 R2 SP1
- Windows 10
- Windows 8.1
- Windows 8
- Windows 7 SP1

Supported browsers

- Internet Explorer 9.0 and above
- Firefox 45.0 and above
- Chrome 45.0 and above

Supported databases

- Elasticsearch (default database for audits, alerts, and content search)
- PostgreSQL (default database for object-based data)
- MS SQL (supported)

Microsoft 365 content search

- Perform advanced content searches to identify data leaks and sensitive information.
- Easily search across multiple mailboxes in a single click.
- Perform pattern-based and condition-based searches to identify emails with personal information.
- Configure alerts that include detailed reports to notify you of potential spear phishing attacks.
- Create custom search profiles and automate periodic content search.

Microsoft 365 delegation

- Delegate routine tasks such as password reset, account unlock, and address attribute changes to non-admin users.
- Create custom help desk roles and assign them to technicians without elevating their permissions in Microsoft 365.
- Delegate the rights of one tenant to another with the cross-tenant delegation feature to ensure critical tasks are always taken care.
- Create help desk roles for domain-specific tasks to monitor your domains closely.
- Create virtual tenants for users from specific departments, teams, projects, etc., and delegate tasks pertaining to these tenants.
- Keep track of technician activities with detailed audit logs.

ManageEngine

M365 Security Plus

M365 Security Plus is an exclusive Microsoft 365 security tool that helps detect security attacks and analyze risks in your Microsoft 365 environment. With its user-friendly interface, you can secure and fortify Exchange Online, Azure Active Directory, Skype for Business, OneDrive for Business, SharePoint Online, Microsoft Teams, and other Office 365 services from a single console.
