

50+ Plugin Integrations to Monitor your Entire App Stack

" Site24x7 gives us deep visibility into critical performance parameters of our resources and helps us stay on top of issues. The all-in-one dashboard gives us one console visibility without the need of shifting to multiple monitoring devices to get complete insights. Ease of use and affordable pricing are factors that impressed me about Site24x7 "

All-in-One Monitoring Solution for DevOps and IT

Website Uptime Monitoring with Zero False Alerts and Actionable Reports

 **Global Point-of-Presence**
Continuously monitor availability and performance of endpoints from 100+ global locations or from within your network.

 **Synthetic Transaction Monitoring**
Analyze and improve app performance by simulating synthetic traffic from global monitoring locations using a real browser.

 **Web Monitoring**
Monitor the uptime and performance of web transactions, online shopping carts using a real web browser.

 **Internet Services Monitoring**
Monitor round-trip time of mail servers and uptime of network services like POP, SMTP, DNS or FTP.

 **Custom Dashboard**
Build a personalized dashboard by knitting together all the critical metrics from every tier of your infrastructure, in a single view.

 **Site24x7 for MSPs and CSPs**
Manage your customers' IT infrastructure with our scalable, secure, and affordable monitoring suite for Managed Service Providers (MSPs) and Cloud Service Providers (CSPs).

 **Public Status Pages**
Create powerful status pages for business transparency. Communicate downtime and promptly notify customers about your service status.

 **Third Party Integrations**
PagerDuty, Slack, Microsoft Teams, HipChat, Webhooks, Zapier, OpsGenie, ManageEngine SDP On-Demand, On-Premise and AlarmsOne.

 **Mobile Apps: Monitor on the move**
Track the availability and performance of your websites and servers anywhere, anytime.

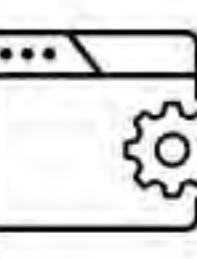

Monitor your Entire Server, Network, and Application Stack from the Cloud

 **Server Monitoring**
Gain insight into the performance of Windows, Linux, FreeBSD, and OS X servers and get root cause analysis for downtimes.

 **Microsoft Azure Monitoring**
Monitor 100+ Azure products covering compute, storage, databases, network, analytics and security using the Azure monitor REST API in near real time.

 **VMware Monitoring**
Auto discover & monitor performance of ESX/ESXi hosts and virtual machines. Measure CPU, memory, network and datastore performance to identify resource contention.

 **Amazon Web Services Monitoring**
Monitor resource usage and performance for key AWS services like EC2, RDS, ELB, EBS, DynamoDB, S3, Lambda, CloudFront, SQS, and SNS.

 **IT Automation**
Automatically execute operational tasks across your on-premises and cloud infrastructure in response to alert events to remediate system issues.

 **Log Management on the Cloud**
Collect, consolidate, index, search, and troubleshoot your servers' logs quickly using an intuitive, unified web client.

 **Network Performance Monitoring**
Automatically discover and monitor devices in your network. Support for over 100 vendors and 1000+ device types.

 **Application Performance Monitoring**
Get deep insight into your Java, .NET, PHP, and Ruby on Rails applications. Identify and resolve performance issues no matter where they originate.

 **Real User Monitoring for Developers**
Get in-depth understanding of problems affecting real users accessing web applications across various devices, browsers and its versions.
