

THE CYBERSECURITY KILL CHAIN EXPLAINED

1

RECONNAISSANCE

Identify the victim. Research systems, people, and weak points.

2

WEAPONISATION

Create malware or exploit code tailored to the target.

3

DELIVERY

Send the payload by phishing, USB, downloads, or exploits.

4

EXPLOITATION

The malicious code executes and takes advantage of a vulnerability.

5

INSTALLATION

Malware installs itself for persistence and further control.

6

COMMAND & CONTROL

The attacker communicates remotely with the compromised system.

7

ACTIONS ON OBJECTIVES

Stealing data, disrupting systems, or causing financial damage.
